Notepad Enhanced provides more effective productivity by bringing the essential productivity tools right to the task bar, making it easy to access. ... (a) Field of the Invention The present invention relates to a digital broadcasting system. (b) Description of the Related Art A digital broadcasting system is configured to perform digital processing on digital broadcasting programs. Digital processing, such as editing, compression, and encryption, has been performed on digital broadcasting programs using equipment such as a personal computer (PC) and a set-top box (STB). A digital broadcasting system includes a set-top box (STB) connected to a television (TV), a digital broadcast satellite (DBS) receiver, a digital broadcast cable (DBC) receiver, and a digital broadcast television (DTV) receiver. A digital broadcasting system can be operated in one of two methods: a method in which programs are recorded in a storage medium and a user accesses the programs recorded in the storage medium at a given time, and a method in which a user accesses the programs as soon as the programs are broadcasted and the programs are not recorded in the storage medium. Thus, a user who does not own a storage medium can only watch a broadcast program after recording the broadcast program at a specific time in a storage medium. That is, a user may be inconvenienced in that he or she must record the broadcast program in a storage medium at a specific time in advance in order to watch the broadcast program when it is desirable for the user to watch the broadcast program. The above information disclosed in this Background section is only for enhancement of understanding of the background of the invention and therefore it may contain information that does not form the prior art that is already known in this country to a person of ordinary skill in the art.

Nonalcoholic fatty liver disease: a neglected epidemic? To report the results of a descriptive cross-sectional study on 12,000 subjects (mean age: 35 years, range: 18-65 years; male/female: 8,533/3,467) diagnosed for nonalcoholic fatty liver disease (NAFLD) from 1997 to 1999, representing a 10% random sample of the general population. Fatty liver was defined as an increase in intrahepatic triglyceride content (IHTG) with a hepatic attenuation of less than 10 Hounsfield units in the hepatic area of the liver that exceeds the attenuation in the renal corticomedullary junction.
