In March of 2017, the Autodesk acquisition of (RED), the company that produces SketchUp, opened the door for a number of third-party (3D) app development tools to fill the gap between SketchUp and AutoCAD. The market for CAD software has grown substantially over the last three decades, from fewer than 25,000 CAD design professionals in 1981 to more than 1.5 million CAD design professionals in 2014, according to the Census Bureau. Of the $5.5 billion CAD software market in 2014, the AutoCAD and Inventor product lines accounted for about 38%. That market is still growing and is expected to grow further. According to IndustryWeek, the U.S. CAD software market is expected to grow from $5.5 billion in 2014 to $8.3 billion in 2018, with about 40% growth per year. An outlook prepared by analyst firm Research and Markets projects the $8.3 billion CAD software market to reach $11.2 billion by 2023. At the high end of the market, the estimated number of software professionals using Autodesk's AutoCAD software grew from fewer than 25,000 in 1981 to more than 1.5 million in 2014, according to the Census Bureau. This growth reflects the design industry's increasing complexity and the continued shift from 2D to 3D drafting, a trend that has been growing for more than 30 years. One CAD industry analyst describes the shift from 2D drafting to 3D CAD as the "most significant development in the history of CAD". Before CAD, drafting was largely a 2D process. In AutoCAD, it is the opposite. "AutoCAD has changed the world by putting the engineer in the driver's seat and creating a 3D CAD environment where anyone can easily draft 2D drawings," explains Steve Uszenski, a product manager in Autodesk's worldwide headquarters in San Rafael, California. "Annotation and post-production tools give you the flexibility to model objects exactly as you want them. It's not perfect, but it's very good at what it does." "Autodesk's primary strength is not software," writes John Cole, who served as senior vice president and CTO of Autodesk from 2006 to 2014. "It is business model. Any other strength, like great software, the product and the value proposition, is a gift." Business model Autodesk is a company that focuses on designing
