Note that the sizes and naming conventions for layers and paths discussed in this chapter are based on working with Adobe Photoshop CC 2014. The section, "Filters: Manipulating Elements in Photoshop," later in this chapter, discusses how the application works in other versions of Photoshop. The primary difference between making a screen capture and cropping an image is that you must make use of the Crop tool (included in the Scratch tool group). In this case, you're capturing a portion of a larger image. Image formats The following formats are typically used for images in your documents: JPEG: This format is designed to preserve the best quality possible for an image while also keeping file size down as much as possible. Any photo shot with a digital camera is likely to be in JPEG format. TIFF: Another common format for digital images is TIFF, or Tagged Image File Format. It provides a lot of options for compressing, but tends to result in larger files and is thus used less often. Photoshop allows for three ways to save TIFF files: Original TIFF: This is the file format you use to create a digital image in. Adobe TIFF: This is the best way to save a TIFF image, especially if you want to compress it later, and you want a higher compression level. PSD: This is used specifically for saving TIFF images to use in layers for Photoshop artwork. The only reason to use TIFF for art is to transfer it into Photoshop. Choosing a document format When you save your work, you need to save it in a format your computer is compatible with. Because the various operating systems and file formats operate in different ways, you need to understand how the program that you're using stores your information and files. This isn't typically an issue when you first open a document, but if you've saved a file on one computer and you now attempt to open it on another computer, you may be greeted with a message asking whether you want to save the changes in the document. Usually, you can simply close all open documents and save your changes in a new file format, and your old document is updated or saved with the new file format. However, you may face a problem if you create a document on your computer and save it as a JPEG. When you transfer your documents to a different computer, you may have to modify the format to your new computer's specifications.

This article will teach you how to select, copy and edit images using Photoshop Elements. Selecting an image In order to use these methods, it is required to learn the 'Select' tool. Selecting an image in the 'Select' tool is exactly how you select an object in real life. Make sure you have the 'Selection' tool selected (you can see a blue circle arrow) before selecting. When you have a loaded image, select it by clicking and dragging the image. Press Space to stop the selection. Now, you can resize the selection by using the arrow keys on the keyboard, or by using the scroll bar. You can also click on the handles of the selection to resize it. You can also hold the shift key to scale it down or the alt key to scale it up. Once you have the selection exactly the way you like it, you should click on the 'Add to' (the blue plus symbol) at the bottom of the 'Select' tool. This method is very helpful if you want to crop the image using the edges, as you have the outline of the edges to work from. If you right click inside the selection area, you can see 'Adjust Edge'. Click on the Arrow to adjust the edges, or you can click on the Numpad number 0 to reset the selection. Crop selection box: Crop selection box: Now you have resized your selection, simply click on 'Crop' and type in your crop size. If you type in '4' in the box, you will crop the image to 4:3. You can also choose the corner of the box to crop the image to. Now, you have cropped the image, select the crop box again and press 'Delete', to remove the crop selection box. In Photoshop Elements, you have the option to add another layer to your image. This is useful if you want a different crop or if you want to change the color or brightness of your image. To add another layer, select 'Select > New'. Now, type in the image name (and click on 'OK') and the image will load onto your canvas. Add another new layer to 05a79cecff

Q: How to use preg_match with numbers (multiple numbers) in PHP? I have this string in PHP: and I need to get numbers from those strings. I try to use this: preg_match('/[\d]+/', $post, $matches); but I get array like this: array(4) { [0]=> int(1) [1]=> int(1) [2]=> int(1) [3]=> int(1) } But i need like this: array(4) { [0]=> int(532246193356) [1]=> int(5324545435) [2]=> int(52554238424) [3]=> int(none) } I need the [3] value because my program need to know if there's in the string a number or not. How can I do that? Thanks A: Easy: preg_match('/[\d]+/', $post, $matches); You're passing $matches the array of matches the preg_match() function returns. You can use the very flexible $matches array to do anything you want. A: array (4) { [0]=> string(1) "5" [1]=> string(1) "3" [2]=> string(1) "5" [3]=> string(1) "5" } How about using array_keys() on the result of preg_match? If the preg_match() function is successful, the array preg_match() returns is indexed numerically by the regular expression's first captured group. The returned array is an array-like object; it has a similar structure to the arrays returned by

Image copyright PA A University of Manchester professor has been appointed to investigate why information about an academic recruitment drive leaked to the press. Sinead Fitzsimons was made the academic governance and discrimination lead for the university's student experience directorate. The disclosure, to the BBC, has been criticised by some. It followed an internal university investigation. But Ms Fitzsimons, who started in November, told the BBC she was "anxious to get back to normal" and get to work. "An urgent investigation is needed before students start to lose out because of a lack of understanding about where they can get support," she said. 'No surprise' Most students would be genuinely shocked if they found out, but those who do will have a real sense of frustration, she told BBC Radio Manchester. She said there was "no surprise" that the detail about the student experience directorate had been leaked. "This is a public university. There is a large student presence at all times," she added. "We try to make sure that our students are engaged with universities as partners, as well as being customers." 'Open door policy' The university said it was "committed to a culture where all staff and students feel that they can open up and be open with each other". A spokesman told the BBC the information had been released by mistake and that the leak was "an isolated incident which will not happen again". The leaks have been criticised by some students. 'Inaccurate information' A student who has been on the student experience executive since its start said it was an "accurate information and we are quite clear in that", and that the only reason he had any criticism was the media's reaction to it. Another said she was "really disappointed" but expressed her feeling that "at this point, any comment would be an attack on the students' personal feelings". But a third said the programme had changed for the better in the four years she had been on it and that while there might be some bad years, the student experience executive had not been helpful in the past. "It was a joke really. It was kind of like a joke of how students feel." 'Wonderful partner' After it was leaked, the university said in a statement: "We understand how important the excellent quality of the experience offered by universities
